

CARESTREAM Digital Dashboard

Key advantages

- ▶ Quick-glance operational status
- ▶ Pro-active notifications
- ▶ Early problem diagnosis
- ▶ Reduce system downtime and negative impact to workflow

Manage system operations— from virtually anywhere

The CARESTREAM Digital Dashboard is a single source of information that empowers system administrators to proactively manage the health of their KODAK CARESTREAM Solution. The Dashboard employs a graphical user interface to display system performance data about the KODAK CARESTREAM RIS, PACS and IMS. Stoplight indicators provide device status information about all devices connected to the Dashboard. This topographical view makes it extremely easy to identify potential problems, enabling proactive maintenance and minimizing negative impact on workflow. The Dashboard resides on the administrator's existing desktop or laptop.

Single source of information helps increase efficiency

Be proactive, not reactive. With one-click access to details about any device, the Dashboard can help increase productivity within your organization by enabling you to respond immediately to equipment operational issues, from any location. The Dashboard can proactively notify you by email, SMS and/or pager when certain events occur.

Pre-populated maintenance checklists provide task details, reminders, a history of completed actions and checklist reports. Performance of recommended maintenance helps avoid unexpected downtime by keeping systems in peak form.

Reports and key data summarization help optimize system operations

Save time by receiving data that has been consolidated from a variety of sources. One-stop shopping for information helps administrators prioritize where action needs to be taken, increasing productivity and reducing system downtime. It also reduces the time spent performing time-consuming checks on each system.

Standard reports for RIS and PACS provide trend information on the efficiency of the system, allowing administrators to adjust schedules, better distribute the workload, and increase staff efficiency.

Maintain integrity of patient data

The Digital Dashboard helps to ensure the accuracy and integrity of patient files by providing statistics such as studies requiring backup, patient ID conflicts, and missing accession numbers.

Disk capacity, database storage and processes are continually monitored. You can customize threshold levels as appropriate for your environment. The Dashboard alerts you to impending shortages, enabling you to take action before workflow is impacted, and eliminating time required to overcome a problem after it has occurred.

These features allow you to provide reliable service to referring physicians and others who come to depend upon patient information in your possession.

Extend the Dashboard capability to non-Carestream Health devices

The CARESTREAM Digital Dashboard can also be used to monitor network communication of non-Carestream Health devices. Maintenance tasks for these devices can also be added to your customized checklists.

Stay connected with other resources

Digital Dashboard creates an efficient work environment by providing access to important tools: PACS/IMS administration, Telnet, links to PACS/RIS user groups, and service/support assistance. Dashboard News—which uses RSS technology—delivers news about the Dashboard direct to your desktop. You can customize the Digital Dashboard interface to include Web sites relevant to you.

More information

To learn more about the full portfolio of CARESTREAM Solutions and how the CARESTREAM Digital Dashboard can help drive efficiency in your department, contact your Carestream Health representative or call 1-877-865-6325, ext. 655. You can also send an e-mail to dashboard@carestreamhealth.com.
