

Managing the Business of Imaging.

Today's imaging departments face growing pressure to work with ever-greater speed, versatility, productivity and efficiency. Consequently, the challenge has grown beyond managing image data and tracking system metrics; administrators need insight into the business performance to enable critical decision-making.

A Web-based and agile analytics portal, Vue Beyond accesses the Vue platform and supplies real-time feedback on key departmental performance indicators – allowing you to identify bottlenecks, develop improvement plans, and fine-tune your resource planning.

Vue Beyond is the foundation for an insight-driven decision-making model to improve quality and efficiency. Valuable intelligence aids you with strategic planning.

ADVANTAGES AT A GLANCE

- Provides real-time performance monitoring of imaging departments
- Key Insights:
 - Study volume and storage use
 - Physician - signing productivity
 - Patient wait time
 - Imaging Report turn-around time
 - Critical results notification
- Enables strategic planning for improved productivity
- Supports multi-site, multi-departmental workflow

Select a parameter, and with one click, drill down to access information and metrics in greater detail.

Intelligent Information for Improved Productivity

To guide your imaging department to a higher level of performance, you need a thorough understanding of where your key metrics stand now. Unfortunately, your options for obtaining and tracking this data have been limited. Recording metrics in a logbook is inefficient and time-consuming. Downloading from EMR, RIS or PACS and manually triangulating data is complex and cumbersome. And turning to a third-party solution is costly.

Beyond System Metrics

Vue Beyond is a complement to the Carestream Vue platform, or other third-party solution using standards-based DICOM and HL7 integration. The intuitive, Web-based portal displays information in simple-to-understand charts outlining productivity and critical trends from various systems. Data is delivered on a continuous basis in real time, allowing you great agility in responding and resolving productivity shortfalls or other issues. Metrics for all individual sites in your multi-site enterprise can be monitored in a centralized data facility. Moreover, you can drill down for specific site metrics, regardless of imaging department.

Foundation for Insight-drive Decision Making

With Vue Beyond, you'll gain the insight you need to make critical strategic decisions. You'll have an immediate view of resource utilization, what requires attention, how to improve patient and referring physician satisfaction while reducing wait time and improving report turn-around time.
