

Speed. Analytics. Quality.

INTELLIGENCE IN ACTION

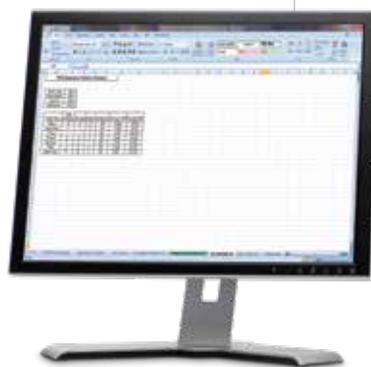

The Power of Eclipse Delivers Analytic Intelligence.

Eclipse is the engine that drives Carestream's software, using AI technology and proprietary algorithms to significantly increase the value of the entire imaging chain, from capture to diagnosis – including healthcare analytics. Case in point: our Administrative Analysis and Reporting Software.

It provides you with a digital dashboard – a centralized information-management tool for tracking key performance metrics of your operators and imaging equipment. It delivers continuous performance feedback, allowing you to analyze results, ensure optimal workflow, implement cost control and develop improvement plans, all to enhance patient care.

Advantages at a Glance

- Provides a single, consolidated source for viewing all performance metrics.
- Pinpoints needs for technology re-allocation and additional operator training.
- Installs quickly and easy to use.
- Custom-formats reports to meet your needs and parameters.

CARESTREAM Administrative Analysis and Reporting Software

Tracking the Pulse of Productivity

This robust software option allows you to monitor, on an ongoing basis, workflow patterns and trends in your radiology department by measuring performance stats of CR and DR units across your entire enterprise. For example, equipment utilization, reject rates and operator technique can be monitored and compared across your entire installed Carestream digital- capture equipment. Information can be formatted as desired and viewed on any authorized PC – making it quick and easy for you to identify over- and under-utilized stations, productivity of individual technologists, image rejection rates at each station, and more.

Taking Control of Your Workflow

The insights Administrative Analysis and Reporting Software provides will prove invaluable in enhancing your overall productivity. Consulting your digital dashboard will make it immediately clear where to add additional CR or DR units; where to replace single-plate readers with multi-plate readers and vice versa; when to increase or decrease staffing; and which technologists would benefit from supplemental training to enhance their performance. In short, you'll gain the power to regulate workflow and control costs *more proactively than ever before* – while increasing patient satisfaction by reducing exam backlogs.

Comprehensive Information

You can depend on consolidated, centralized presentation of *all* the performance data you need, including cassette use, individual technologist and workload statistics, exposure index, exam data, and frequency and cause of rejected images. Data can be automatically custom-formatted the way you need it, in a simple Excel format – no need to reformat, no wasted time. Plus, the software can display your data in chart form for a visual representation and a quicker assessment of the activity. Interactive tools facilitate rapid analysis and application of findings for timely adjustment and optimization of workflow processes.

Product Specifications

This software option is available on products running CARESTREAM ImageView and DirectView Software. Contact your local representative for complete details.
