

It's Like Having a Skilled Radiologist Right Onsite.

If you are a teleradiology business or a healthcare provider looking to expand your professional services to other facilities, Vue for Teleradiology offers you the simple and economical tools to do so – allowing you to boost volume, referrals and revenue without significant IT and personnel investments.

Vue for Teleradiology offers the ideal balance between reporting speed and quality. It enables your expert radiologists to offer referring physicians remote reading and reporting services with rapid turnaround times – giving them the data they need, right where they need it: at the point of care. These referring doctors also want reports with greater clinical value and insight. Vue Reporting delivers both these key advantages – ensuring physicians receive rich and robust information.

ADVANTAGES AT A GLANCE

- Web-based report-request order entry enables RIS-less workflow.
- Reduce integration costs between systems at the remote site and the service provider, enabling addition of a new site in minutes.
- Supporting exam data can be accessed by the radiologist at any reading location.
- Replaces “paper-only” reports with an image-rich, quantitative-data-packed summation of the exam.
- Referring doctors receive great added value, leading to increased collaboration and referrals.

Delivering on the Promise of Teleradiology.

The quality of Vue Reporting complements the speed of Vue for Teleradiology, to give referring physicians the comprehensive, high-value data they need, right where they need it – at the point of care. This at last unlocks the full potential of Teleradiology as a powerful way to maximize your quality of care.

Vue Teleradiology Workflow: Ease, Quality and Efficiency at Every Step.

TECHNOLOGIST

The technologist uses a simple, Web-based form to send the Telerad Read Request. This supplements data already populated from a local modality with exam data, including procedure codes and reason for exam. A new referral site is connected in minutes with no change to existing RIS or PACS workflow or your operating cost.

TELERADIOLOGIST

Down the hall or across the globe, the teleradiologist completes the read with advanced clinical tools such as embedded 3D, Anatomical Registration or Lesion Management. Improves turnaround time with an accurate diagnostic report using embedded voice recognition.

REFERRING PHYSICIAN

The Referring doctor uses a universal viewer to conveniently access the images and report – with 3D processing and comparisons. No dedicated application training is required. Final report with inclusion of quantitative data, charts and hyperlinks provides added clinical insight.

PATIENT

Patients have access to their images and reports via a secure, Web-based portal. Reduces cost for CDs or DVDs for the referring site. Improves the patients' satisfaction by empowering them to manage their own records and share with privileged clinicians.

BILLING

All critical patient and exam information, including insurance data, can be directly exported to billing systems, enabling a profitable operation. Reduces the need for complex integration and accelerates deployment.

ADMINISTRATOR

Administrators consult a centralized information-management dashboard for real-time feedback on key department performance metrics – the data needed to achieve optimized productivity.

Vue. Knowing Matters.

In the contemporary Radiology Department, knowledge is everything. With Vue, you'll know that the issues crucial to your success are being addressed. Vue amplifies the clinical, business and IT value of radiology by:

- Offering greater value and insight as you generate clinically rich reports.
- Increasing patient engagement and satisfaction with an intuitive patient portal.
- Controlling costs and streamlining data flow with modular components within the platform.
- Fostering clinical collaboration without boundaries.

Most important, Vue offers a single, flexible, configurable platform. It lets you make the right investment now – and build on that investment in the future.

“We are much happier with the performance, the accuracy and the speed of our practice, since moving to Carestream’s Vue for Teleradiology.”

Dr. Randall Stenoien, M.D.
Radiologist and Founder
