Mammography Workstation and PACS

Single Desktop Reading to simplify your work

- View mammography and general radiology procedures, along with related non-DICOM data, from a single desktop
- Multi-modality and multi-vendor image support
- Choice of display configurations

Optimized Workflow decreases reading time and fatigue while increasing procedure volume

- Industry-leading mammography tools
- User configurable and intelligent hanging protocols
- Ease of comparing multiple priors
- Choice of navigational devices

Scalable to fit your needs today and tomorrow

- Standalone, enterprise, and multi-site environments
- SuperPACS™ Architecture for efficient cross-site reading and workload balancing

Vendor Neutral to leverage existing investments

- IHE-compliant; integrates through industry-standard protocols
- Automatic pre-fetch of priors

Diagnostic Confidence to improve patient care

- Computer-Aided Detection (CAD)
- Cross-reference lines aid in locating suspicious areas on opposing views
- Alert to indicate unread images

User-Configurable Display Protocols
(Quick access to comparisons through dedicated keypad)
