

# Affordable, PACS-Based Archiving.

SMART IMAGING SOLUTIONS

## The Economical way to Add PACS to Your Practice.

The benefits of upgrading to PACS-based viewing, reading and storage of diagnostic images can be tremendous. But for many facilities or departments, this capability has simply remained unaffordable.

Now that's changed. Mini-PACS from Carestream has arrived. It delivers the advanced reading and reporting tools you need, at a price that's manageable within almost any budget. Tap into the benefits of Mini-PACS, and enhance both your standard of care and productivity.

## Advantages At a Glance

- Compatible with CARESTREAM Image Suite V4 and other industry-standard image-acquisition programs
- Measurement tools include Lippman-Cobb Angle, Goniometry and Coxometry
- Supports image transfer to OrthoView™ Software for pre-operative orthopedic planning
- Offers a purchasable option for remote image viewing on mobile devices

## Mini-PACS: Meet The Affordable PACS Solution.

Mini-PACS has arrived, offering highly cost-effective image reading and archiving features similar to those of hospital enterprise systems. It combines efficient worklist capabilities, a full-featured DICOM viewer, reading and reporting tools, and direct-to-CD-or-USB archiving software – all in a single, easy-to-install module.

## Remote Image Viewing

Mini-PACS also offers optional Tablet-Viewer Software. This allows physicians to view patients' diagnostic images from their home, office or any remote location – on an iPad or many other mobile devices. This boosts physician convenience and productivity. It also supports improved doctor-patient communication, as physician can share images with patients while explaining their diagnoses.

## Additional Capabilities

- Optional Clinical Report Software allows you to edit, review and print on a workstation or Web client.
- Dual monitor support on Web clients enables increased efficiency by allowing the viewing of multiple images at once.
- DICOM Store Service Class Provider (SCP) software offers the ability to receive and review images from CT, MR, ultrasound and additional CRs.
- On-demand or scheduled backup capabilities provide flexibility for secure data backup.
- Storage options provide easy backups to CDs or USBs.
