improve the quality and utility of the company's digital solutions.

Carestream's medical imaging solutions are backed by a support team of product and industry specialists who are dedicated to keeping you up and running at peak performance. Carestream supplements 100 years of knowledge and experience with interactive user groups, medical advisory boards, and input from our diverse radiology customers to constantly optimize productivity and maximize your investment—thus accelerating distribution of radiology results.

CARESTREAM Vue for Radiology

 powered by Carestream's unique SuperPACS™ Architecture, create comprehensive patient information regardless of system or location. A true patient-centric workflow means clinicians can access patient information from any location at any time. The integrated order-to-result workflow streamlines the entire imaging process.

CARESTREAM Vue for Cardiology

 A single enterprise-wide image and information management solution specifically designed for cardiology data can help you achieve even greater efficiency by integrating with a vendor neutral archiving. Cardio lab systems to streamline ordering, reading on-site or remotely and combine review capabilities with a single workstation. Web-based solution, Vue for Cardiology can consolidate disparate cardio lab systems to streamline ordering, reading on-site or remotely and combine review capabilities with a single workstation.

CARESTREAM Vue for Cloud-Based Services

Presenting information with the next-generation toolsets from a vendor-neutral archiving approach. Carestream has adapted a ONE-WORKSTATION approach to managing imaging information on a predictable, pay-as-you-go basis. Fully managed PACS, Archiving, Collaboration and Portal Services enable new ways to collaborate for better patient care. The IT industry has turned to Cloud Computing to optimize limited public Cloud data infrastructures, Carestream is your proven trusted partner for Cloud-Based Services.

Virtual Collaboration.

 PATIENT -CENTRIC WORKFLOW.

PRODUCTIVITY ANYWHERE.

TRUSTED PARTNER.
Proven leadership, smart innovation, customer success –

BENCHMARK IN HEALTHCARE IT.

Vue
Vue is the next-generation healthcare IT platform. Continuing a lineage of imaging leadership and fueled by a commitment to vanguard technology, Vue represents an advanced integration of imaging and information management. With thousands of proven implementations worldwide, this benchmark innovation streamlines workflow, supports clinical excellence and results in superior patient outcomes and care.
Complex radiology workflow requires intuitive solutions for all end-users. Carestream has adapted a ONE-WORKSTATION philosophy when designing the next generation RIS+PACS+ Reporting. Web-enabled Vue for Radiology is accessible anywhere, thus accelerating distribution of radiology results.

As the first to provide native clinical tool sets that revolutionized volume reporting, Carestream’s smart innovations continue to optimize productivity and maximize your investment—and can accommodate your growing imaging needs.

SINGLE SYSTEM ADVANTAGE.

A single enterprise-wide image and information management solution specifically designed for cardiology data can help you reduce costs and improve productivity. With an innovative Web-based solution, Vue for Cardiology can consolidate disparate cardio lab systems to streamline ordering, reading on-site or remotely and combine review capabilities with a single workstation.

Achieve even greater efficiency by integrating with a vendor neutral archive to create a single patient-centric repository.
PATIENT-CENTRIC WORKFLOW.

A true patient-centric workflow means clinicians can access comprehensive patient information regardless of system or location. Powered by Carestream’s unique SuperPACS™ Architecture, create one global work list and virtual reading environment for the end user by seamlessly connecting multi-vendor, multi-site RIS+PACS.

Presenting information with the next-generation toolsets from a legacy system may mean significant costs and change management. SuperPACS™ Architecture can also maximize your current investment by leveraging your existing infrastructure without significant operational interruption.
