OrthoView™ Orthopaedic Digital Planning for Vue PACS

Integrated, network-based orthopaedic planning and templating.

CARESTREAM Vue PACS integrates seamlessly with industry-leading OrthoView™ Orthopaedic Digital Planning software. Together, they enable surgeons to perform preoperative planning and templating using digital images. Plus, the solution is scalable to fit the specific needs of a private practice, imaging center, clinic or hospital.

ADVANTAGES AT A GLANCE

- Allows accurate templating in a 100% filmless environment
- Saves costs, with a flexible licensing model
- digital prothesis templates
- Enables convenient templating from
- local or remote Vue workstations
- Scales to suit facilities of any size
- Simplifies planning with intuitive
- wizards and automatic one-click
- or manual scaling

OrthoView™ Orthopaedic Digital Planning for Vue PACS

Additional Features

- Launches and logs in automatically with a single action button from any Vue PACS workstation
- Shares images transparently between Vue PACS and OrthoView
- Stores templated exams and reports automatically to the patient's record in Vue PACS

1. Scaling

Scaling is achieved with one click using QuickScale, the measurement of radiographic markers, or a ruler, or by entering an established magnification factor.

2. Planning

The OrthoView solution features intuitive wizards – digital frameworks that can be positioned over key bone landmarks. The software converts the assessments to size and positions them on digital templates. An advanced toolset also enables a wide number of digital anatomical measurements and assessments.

3. Templating

When the planning wizards are used, the OrthoView solution recommends positions and template sizes. Resizing and positioning adjustments are easy to make.

4. Reporting

A comprehensive report, including images, can be printed for inclusion in patient notes or saved to Vue PACS as a clinical audit trail.

Key Capabilities

This solution is designed for all of these procedures:

- Total Hip in 60 seconds or less
- Knee
- Pelvis
- Joint replacement
- Trauma and comprehensive fracture management planning
- Spine and assessment of deformities
- Pediatrics
- Osteotomy
