0 Introduction

0.1 Executive Overview

This document covers the *Kodak DryView* 6800 Laser Imager (referred to as "Imager" henceforth).

The following DICOM SOP Classes are supported:

SOP Class Name	SOP Class UID	Service Class Role
Verification SOP Class	1.2.840.10008.1.1	SCP
Basic Grayscale Print Management Meta SOP Class	1.2.840.10008.5.1.1.9	SCP
Basic Color Print Management Meta SOP Class	1.2.840.10008.5.1.1.18	SCP
Basic Annotation Box SOP Class	1.2.840.10008.5.1.1.15	SCP
Presentation LUT SOP Class	1.2.840.10008.5.1.1.23	SCP

0.2 Scope and Field of Application

This document describes the DICOM functionality of the Imager. The Imager captures exam images from DICOM sources and prints the images. The Imager acts as a DICOM Service Class Provider (SCP). The Imager performs transactions over a TCP/IP network via the DICOM messages exchange protocol.

0.3 Important Considerations for the Reader

This DICOM Conformance Statement is written in such a way that assumes the reader has a basic understanding of DICOM. This DICOM Conformance Statement by itself is not sufficient to guarantee successful connectivity between the Imager and equipment from other vendors. The following considerations should be made:

- The integration of equipment from different vendors (including Carestream Health) goes beyond the scope of the DICOM 3.0 standard and the DICOM Conformance Statements from Carestream Health and other vendors. It is the responsibility of the user (or user's agent) to assess the application requirements and to design a solution that integrates Carestream Health equipment with equipment from other vendors.

- When the comparison of this DICOM Conformance Statement with a DICOM Conformance Statement from another vendor indicates that connectivity should be possible, it is the responsibility of the user (or user's agent) to verify this by carrying out validation tests and to check whether all required functionality is met.

- Carestream Health reserves the right to make changes to the Imager architecture described in this document. The user (or user's agent) should ensure that any equipment connected via DICOM to Carestream Health equipment also follows the future evolution of the DICOM 3.0 standard. Failure to do so may result in (partial) loss of connectivity.

- For all DICOM attributes of type M (shown in the column of SCP Usage), the SCU must send a valid value within the published range. We guarantee to support all published values. A missing attribute would result in returning an error of Missing Attribute, an invalid value would result in returning an error of Invalid Value and an Out of Range value would result in returning an error of Out of Range. It is up to the SCU to retry with a new value or to abort the association.

- For all DICOM attributes of type U (shown in the column of SCP Usage), the Default Value or the Configured Value (if it exists) is used for all cases of Missing Attribute, Invalid Value or Out of Range. No error would be generated from this type. We will send back the corrected value (i.e. the value being used) to the SCU. It is up to the SCU to accept, to decline (abort) or to resend a new value at this point.

- Attributes received at the Image Box level will override the same attribute received at the Film Box level for a particular image with the exception of the Tonescaling method specified in configuration information. Only one Tonescaling method is supported in one film box (Curve Shape or Perception LUT), the image box Perception LUT cannot override the film Box Curve Shape.

1 Implementation Model

This implementation model uses the DICOM Basic Print Management Meta SOP Class to receive studies for the Imager. Associations from multiple SCUs are supported.

DICOM Interface

Modality ◄──────► *Kodak DryView* 6800 Laser Imager

Basic Print (SCP)
1.1   Functional Definitions

The Imager acquires images from the connected device(s), temporarily stores them on disk, and then formats and prints them to film.

1.2   Sequencing of Real-World Activities

The Imager prints images to film upon request from the SCU (i.e. N-ACTION-RQ). It operates as required to meet the definition of the Print Management Service Class.

2 Application Entity Specifications

The Imager provides Standard Conformance to the following SOP Classes as an SCP.

SOP Class Name	SOP Class UID
Verification SOP Class	1.2.840.10008.1.1
Basic Grayscale Print Management Meta SOP Class	1.2.840.10008.5.1.1.9
Basic Color Print Management Meta SOP Class	1.2.840.10008.5.1.1.18
Basic Annotation Box SOP Class	1.2.840.10008.5.1.1.15
Presentation LUT SOP Class	1.2.840.10008.5.1.1.23

2.1 Association Establishment Policies

2.1.1 General

2.1.1.1 *Delivery - Basic Grayscale/Color Print Management SCP*

The Imager's maximum PDU size is 128 Kbytes.

The Imager is a Grayscale imager. Therefore the Basic Color Print Management SCP will be rejected by default but may be enabled and supported via the Imager's Service User Interface. When enabled, the Imager will convert the color image(s) to grayscale.

2.1.2 Number of Associations

Imager will accept by default maximum of 12 simultaneous associations, but this is configurable and can be modified. If an attempt is made to open more than the number of configured simultaneous associations, the Imager will reject the additional associations (A-ASSOCIATE-RJ). Note: The A-ASSOCIATE-RJ will be transient and not permanent…See 2.2.1.4, Association Rejection.

2.1.3 Asynchronous Nature

The Imager allows up to 1 invoked and 1 performed operation on an Association (it is synchronous, e.g. the SCU/SCP can send only 1 Request and must wait for the corresponding Response before sending the next Request).

2.1.4 Implementation Identifying Information

The Imager provides the Implementation Class UID of "1.2.840.113564.3.3.2"

The implementation version name attribute is of the form of "**DV6800**yy**v**xxx" where yy is the Released Year and xxx is the Version Number. For example: **DV6800**07v1.0 stands for DryView 6800 Laser Imager software, released in 2007, with 1.0 as the version.

The Called AE Title used by the Imager is the hostname.

2.2 Association Acceptance Policy

2.2.1 Associated Real-World Activity

2.2.1.1 Delivery - Basic Grayscale/Color Print Management SCP

The Imager accepts Associations for the purpose of acquiring images and printing them on a local printer.

When an association has been established:

- The SCU can request the Imager to create or set Film Sessions, Film Boxes, set Image boxes, Annotation boxes, Presentation LUT and request Printer Status
- The SCU can request to change the attributes that are allowed for these boxes.

The port number is configurable and the default setting is 5040.

2.2.1.2 Application Entity Titles (AE_TITLE)

The Called AE Title for the Imager is "DV6800".

The Called AE Title may be used to select behavior, which is unique to *Carestream Health* legacy products for backwards compatibility:

- Suffix "/C" option of the AE Title

  Curve shape tone scaling values are usually interpreted in standard 0-999 range. However, to support Carestream Health legacy devices, the Imager's Print Server can be configured to accept the curve shape in the 0-690 range. If the Called AE Title contains a suffix "/C", the 0-690 range shall be used.

  Note:

  ♦ NER_ option of the AE Title will not provide status changes in the Imager as they occur. It is necessary to turn on the N-Event-Report from the Imager's User Interface.

  ♦ Suffix "/1..n" option of the AE Title will all send to the default and only output bin.

2.2.1.3 Association Negotiation

If the association is accepted, the list of requested Presentation Context items is returned with each item marked as accepted or rejected with the Result/Reason field containing the values specified in PS 3.8 Table 9-18 of the DICOM Standard, Release 03 Oct 2003.

2.2.1.4 Association Rejection

If the association is rejected, the Result, Source, and Reason/Diagnostic fields in the response message contain the values show below:

Condition	Result	Source	Reason/Diagnostic
Limit on simultaneous associations exceeded	2 – Rejected Transient	3 - DICOM UL Service Provider (Presentation)	3 – local limit exceeded
The IP Connection could not established.	2 – Rejected Transient	3 – DICOM UL Service Provider (Presentation)	1 – temporary congestion
The destination printer is recognized, but not installed.	1 - Rejected Permanent	1 - DICOM UL Service User	1 – no reason given
No Implementation UID	1 - Rejected Permanent	2 – DICOM UL Service Provider (ACSE)	1 – no reason given
No Application Context Name	1 – Rejected Permanent	2 – DICOM UL Service Provider (ACSE)	1 – no reason given
DICOM protocol version is not supported	1 – Rejected Permanent	2 – DICOM UL Service Provider (ACSE)	2 – protocol version not supported
No Presentation Context items given.	1 – Rejected Permanent	2 – DICOM UL Service provider (ACSE)	1 – no reason given

2.2.3 SOP Specific Conformance

2.2.3.1 *Verification*

The Imager provides standard conformance to the DICOM Verification Service Class. Upon receipt from an SCU of a verification of communication request, the Imager will issue confirmation.

2.2.3.2 *Delivery- Basic Print Management SCP*

The Imager provides standard SCP conformance to the DICOM Basic Print Management SOP Class. Association attempts will be rejected if more than the maximum number of simultaneous delivery SCP associations is attempted.

2.3 Basic Print Management Meta SOP Class

The Meta SOP Class is defined by the following set of supported SOP Classes:

SOP Class	UID Value
Basic Film Session SOP Class	1.2.840.10008.5.1.1.1
Basic Film Box SOP Class	1.2.840.10008.5.1.1.2
Basic Grayscale Image Box SOP Class	1.2.840.10008.5.1.1.4
Basic Color Image Box SOP Class	1.2.840.10008.5.1.1.4.1
Printer SOP Class	1.2.840.10008.5.1.1.16

SCUs should not mix color and grayscale images at the film session level. They should create separate color and grayscale film sessions in succession.

Note: In the sections below, in addition to the Service user interface, the customer user interface also provides the ability to configure some of the attributes and default values.

2.4 Basic Annotation Box SOP Class

2.4.1 DIMSE Service N-SET

The Basic Annotation Box SOP Instance is created by the SCP at the time of the Basic Film Box SOP Instance is created, based on the value of the Annotation Display Format ID attribute (2010,0030) of the Basic Film Box.

A maximum of 6 annotation boxes may be received with a film box.

Attribute & Usage	SCP Usage	Tag	Supported Values	Default Values
Annotation Position	M	(2030,0010)	Annotations are placed in order from upper-left to lower right.	None.
			If the Annotation Display Format ID is 1, then value must be 1. The text will be printed on one line at the bottom of the film.	
			If the Annotation Display Format ID is 6, then valid range is 1-6. The text will be printed within 2 lines at the bottom of the film, within 6 different positions.	
			If the Annotation Display Format ID is LABEL, the valid range is 0-1. The text will be printed at the bottom of the film on two lines.	
			If the Annotation Display Format ID is BOTTOM, then the valid range is 1 to the number of images in the Film Box. The text will be placed below the images.	
			If the Annotation Display Format ID is COMBINED, then the valid range is 0 to the number of images in the Film Box. Position 0 will be printed at the bottom of the film. The other annotations will be printed below the images.	
			Any annotation box with a position outside the valid range will be ignored.	
Text String	M	(2030,0020)	Up to 64 characters (see Note)	None.

Note:	The number of characters displayed may be less than 64 characters depending on the size of the film, the page format, the annotation format and the characters used. This exception does not apply to Annotation Format IDs of LABEL or 1.

2.4.2 Annotation N-Set Status Code.

0213H	Failure	Page limit is exceeded. (DICOM PS 3.7 Annex C.5.22)

2.5 Presentation LUT SOP Class

2.5.1 DIMSE Service N-CREATE

The Presentation LUT SOP Instance is created by the SCP upon receipt of the N-CREATE action. The Print SCU may create Presentation LUT instance prior to being referenced by the Basic Film Box. Multiple Presentation LUT instances are supported in an association, but only one instance will be supported for each image.

The SCU shall send either Presentation LUT Sequence or the Presentation LUT Shape. These values are mutually exclusive and the action will result in an error if neither or both are present. The presence of the Presentation LUT instance overrides any data set in the Configuration Information attribute (2010,0150) of the Film Box or Image Box.

Attribute & Usage	SCP Usage	Tag	Supported Values	Default Values
Presentation LUT Sequence	M	(2050,0010)		None.
>LUT Descriptor	M	(0028,3002)	The first value is the number of entries in the lookup table. The number of entries shall be equal to the number of possible values in the input. (For 8 bit input will be 256 entries, for 12 bit input it will be 4096 entries) The second value is the first input value mapped, and shall always be 0. The third value specifies the number of bits for each entry in the LUT Data. It shall be between 10 and 16 inclusive.	None.
>LUT Explanation	U	(0028,3003)	Free form text explanation of the meaning of the LUT.	None.

Attribute & Usage	SCP Usage	Tag	Supported Values	Default Values
>LUT Data	M	(0028,3006)	The LUT Data shall be stored in a format equivalent to 16 bits allocated where the high bit is equal to bits stored - 1, where bits stored is the third value of the LUT Descriptor.	None.
Presentation LUT Shape	M	(2050,0020)	Enumerated values IDENTITY and LIN OD.	None.

2.5.2 Presentation LUT N-Create Status Code.

Code	Status	Action/Meaning
0000H	Success	The Presentation LUT is created. Some attributes may have different values than those that were requested. The changed attributes will be returned with the values that were used. (DICOM PS 3.7 Annex C.1.1)
0110H	Failure	The Error Comment field will contain the detailed description of the error. (DICOM PS 3.7 Annex C.5.21)

2.5.3 DIMSE Service N-DELETE

Upon receipt of an N-DELETE from the SCU, the Imager removes the Presentation LUT instance.

2.5.4 Presentation LUT N-Delete Status Code.

Code	Status	Action/Meaning
0000H	Success	The Presentation LUT is deleted. (DICOM PS 3.7 Annex C.1.1)
0110H	Failure	The Error Comment field will contain the detailed description of the error. (DICOM PS 3.7 Annex C.5.21)

3 Communication Profiles

3.1 Supported Communications Stacks

The Imager provides TCP/IP Network Communication Support as defined in Part 8 of the DICOM standard.

3.2 Physical Media

The Imager supports *Ethernet* with the following physical connectors:

Standard Twisted pair (10BaseT, 100BaseT, and 1000BaseT)

4 Extensions/Specializations/Privatizations

There are not any extensions/specializations/privatizations.

5 Configuration

The following attributes are configurable by a qualified service provider:

- IP address
- DICOM Port number
- Subnet Mask
- Local Network Host Name (Imager's AE Title)
- Router Address (Gateway)
- Number of maximum associations
- DICOM Service(s) available
- Basic Color Print Management Association
- N-Event-Report support (Default is Off)
- Other configuration indicated in the SOP Class tables.
- Other destination properties as indicated in this document.

6 Support of Extended Character Sets

The Imager supports the ISO-IR 100 Latin 1 character set as well as the ISO-IR 6 default character set.

The Imager also supports the ISO-IR 87 character set. This is part of the JIS X 0208 code table for 2-byte Japanese character sets that supports Kanji (ideograph), Hiragana (phonetic), and Katakana (phonetic).

The Imager also supports the ISO-IR 13 character set. This is part of the JIS X 0201 code table for single-byte Japanese Katakana (phonetic) characters.

The value set in the tag Specific Character Set (0008,0005) must be either:

1. "ISO_IR 6" (default repertoire)
2. "ISO_IR 100" (Latin 1)
3. "ISO_1R 13" (Katakana)
4. "ISO 2022 IR 13\ISO 2022 IR 87" (Katakana, Hiragana, Kanji)
5. "ISO 2022 IR 159" (supplementary Kanji set)
6. "ISO 2022 IR 149" (Korean Hangu set)
7. "GB18030" (Chinese set)
8. or blank (ISO-IR 6 is the default character set)

7 Error Handling

Warnings indicate that the operation/notification has been completed, but an error was detected. Under warning conditions, operations continue forward without additional actions.

Failures convey that the operation/notification failed and was not performed. Refer to the DICOM Specification PS 3.7, Annex C for the Status Types supported by the DIMSE services.

Annex A - Configuration Information

The Configuration Information attribute contains the list of specific values. These attributes are not DICOM standard attributes.

The Configuration Information value is an ordered list. The attribute is specified using the ASCII two-character key prefix in the following sequence:

1. Curve Shape, Contrast, Pivot Density
    or Perception LUT
2. Text Macros.

The Film Box Curve Shape value applies to all images in the Film Box except when Curve Shape or Perception LUT is specified for the image in the Image Box.

Attribute	Usage	Description	Default
Curve Shape designated by the ASCII two-character prefix: CS	U/M	000 to 999 Note: 000 = linear, 999 = highest curvature Curve Shape is a tone scale adjustment used to optimize the image on film compared to the image on the operator console monitor. Curve shape is not valid when a Perception LUT is specified.	Film Box: Value set in the Printer by the user Image Box: Basic Film Box Curve Shape
Contrast designated by the ASCII two-character prefix: CN	U/M	-5 to 5 Note: Integer values only. Negative Contrast settings are lower contrast where the amount of data that is represented by medium film densities is increased. Positive settings are higher contrast where the amount of data that is represented by high and low densities is increased.	Value set in the Printer by the user
Pivot Density designated by the ASCII two-character prefix: PD	U/M	0.0 to 2.4 Note: Value must be specified in increments of 0.2. Densities above and below the pivot density will be adjusted up and down by an amount that is a function of the difference between the code value and the pivot density code value.	Value set in the Printer by the user
Perception LUT Selection designated by the ASCII three-character prefix: LUT	U/M	LUT = m, n Allows selection of the LUT that best suits the user's images. M is the name of the TFT set and N specifies a contrast setting within the group. Curve shape will be ignored if the LUT parameter is used. m=string (0=default group) n=0 to 15 (0=use default value set at Service User Interface)	m=0, n=0

Attribute	Usage	Description	Default
Text Macros designated by the ASCII two-character key prefix: TM	M/M	%PRNTDAT% Capture Date* DD-MMM-YY %TIM% Capture Time* HH:MM (HH=0-23) %FOF% Film of Film Count NN/MM %$TIME$% Time of Printing HH:MM:SS %SES% Film Session Label AAAAAA (1-64 chars from the Film Session SOP Class) Note: The text macros will be printed on the bottom of the film and will be truncated if necessary	None

* This is the receiving Date/Time of the first valid image of the first Film Box.

Examples:

"CS333"

The curve shape is set to 1/3 of the printer's tone scale range and defaults are applied to contrast and pivot density.

"CS500\CN3\PD2.2"

The curve shape is set to 1/2 the printer's tone scale range, Contrast is set to 3, and pivot density is set to 2.2.

"PD2.0"

The pivot density is set to 2.0, and defaults are applied to curve shape and contrast.

"CS333\CN3\PD2.2\TM%PRNTDAT%%TIM%%FOF%"

The curve shape is set to 1/3 of the range, Contrast is set to 3, and pivot density is set to 2.2.

The following text macros will be printed on the bottom of the page:

    Date of Printing, Time of Printing, and Film of Film count.

"LUT=Ver693c0.w87,3"

The Perception LUT TFT set is "Ver693c0.w87" and the Contrast Setting is 3.

"LUT=0,3\ TM%PRNTDAT%%TIM%%FOF%"

The Perception LUT TFT set is 0 (default) and the Contrast Setting is 3.

The following text macros will be printed on the bottom of the page:

    Date of Printing, Time of Printing, and Film of Film count.

"TM%PRNTDAT%%TIM%%FOF%"

The following text macros will be printed at the bottom of the page:

Date of Printing, Time of Printing, and Film of Film count.

"PD2.0\CN4\CS333"

This is **invalid** because the attributes are out of order, curve shape must precede pivot density and contrast, and contrast must precede pivot density. It should be "CS333\CN4\PD2.0".

"CS333\PD1.2\LUT=0,3"
This is **invalid** because Curve Shape and Pivot Density cannot be mixed with Perception LUT. In this case, the Perception LUT setting will be used.

Annex B - Custom Formats

The following formats are expected to be supported by imagers manufactured by Carestream Health and will only be specific to these printers.

Format ID 101

This format consists of 7 image positions, 1 large image in the upper section of the page and 6 smaller images in the lower section of the page. The size and positioning of the images are defined in terms of the standard formats 2 and 12.

Upper Section: 1 frame of a 2-up format.

Lower Section: 6 frames of a 12-up format.
Format ID 102

This format consists of 11 image positions, 2 large images in the upper section of the page and 9 smaller images in the lower section of the page. The size and positioning of the images are defined in terms of the standard formats 6 and 15.

Upper Section: 2 frames occupying top 1/3 of media.

Lower Section: 9 frames occupying bottom 2/3 of media.
Annex C - Unsupported Film Types

The following table illustrates what happens when the Imager receives an unsupported Film Size ID [DICOM element (2010,0050)] or Medium Type ID (2000,0030) from an SCU. This section is added to clarify the Imager's behavior when these conditions occur.

The Imager initializes a list with the Media Type enumerations for known reflective medias and keeps a collection of media Types that do not allow substitution. For the Type that allows substitution, this priority is followed:

1. The highest priority is placed on matching the film base's reflective property.
2. The next priority is granted to the Film Size ID (2010,0050). The Imager will attempt to match the film size to that requested in the N-CREATE Film Box.

Note: For best results, Print SCUs should either specify films that are installed in the imager or not specify these attributes.

The following tables list the details unique to specific printer model that recognizes the Medium Type currently installed.

Medium Type Supported	Medium Type Currently Installed	Film Size Supported	Film Size Currently Installed	Result
Yes	Yes	Yes	Yes	The imager prints the page on the specified film type.
Yes	Yes	Yes	No	The imager stores the page in a queue. User must change film magazines to appropriate size and base to get printout.
Yes	Yes	No	*	The Imager replaces the SCU's Film Size of the same base selection with the next larger supported size for the imager. This new Film Size ID is what is passed to the printer. If no larger film size is available, then the next smaller supported film size is selected. In the Imager's response to the SCU, the Film Size ID (2010,0050) is modified so that it contains the new Film Size ID. The page is either queued in the imager or printed.
Yes	No	Yes	Yes	The imager will queue the page for that size and base.
Yes	No	No	*	The Imager replaces the SCU's Film Size selection with the next larger supported size of the same base for the imager. If no larger film size is available, then the next smaller supported film size of the same base is selected. This new Film Size ID is what is passed to the imager. In the Imager's response to the SCU, the Film Size

| Medium Type Supported	Medium Type Currently Installed	Film Size Supported	Film Size Currently Installed	Result
				ID (2010,0050) is modified so that it contains the new Film Size ID. The page is queued in the imager, and printed when the film size and base is available.
No	*	Yes	No	The Imager replaces the SCU's Medium Type selection with the supported medium type for the selected film size for the imager. This new Medium Type ID is what is passed to the imager. The page is queued in the imager.
No	*	No	*	The Imager replaces the SCU's Film Size selection with next larger supported size for the destination. This new Film Size ID is what is passed to the imager. The medium type of this new film size will also be selected. In the Imager's response to the SCU, the Film Size ID (2010,0050) is modified so that it contains the new Film Size ID. The page is queued in the imager.

Annex D – Printer Specifications

The following tables list the details unique to specific the Imager.
D.1   Film Size

This table shows the accepted film sizes. The maximum image size represents the largest image accepted with and without annotation printed on the bottom of the film.

If annotations are printed, some pixel space will be used for the text and the maximum image size will be reduced.

If the minification or crop option is selected, larger images may be printed but some data will be lost in order to fit the images onto the page. In these cases, an icon will be added to the bottom of the page to indicate minification or cropping has been performed. Here are examples of the icons placed at the bottom of the page:
| Minify icon | Scale icon | Crop icon |

If the requested image size is smaller than the image size, then minification option is needed to get the image printed.

The above tables implicitly lists the maximum image values of a 1Up given the DICOM Requested Decimate/Crop Behavior attribute set to FAIL. For all other formats the maximum image values follows these general rules:

- In any Row, the sum of all Image Widths plus all Horizontal Separations cannot exceed the above Max Width values.

- In any Column, the sum of all Image Lengths plus all the Vertical Separations cannot exceed the above Max Height values.
